PROPOSAL FOR 1337 VENTURES

A new 1337.ventures

One rebuilt website for 1337 Ventures and Leet Capital. Clear for every founder, and built to stand up to a Securities Commission audit.

Raja Hafify Bin Zaed · Artifisi Sdn Bhd · November 2026

WHY NOW

In October, two PHP flaws let anyone take over a PHP web server.

17 Oct

Amazon sees attacks, four days before any fix exists

21 Oct

PHP ships emergency patches. Banks and hospitals take servers offline.

24 Oct

First confirmed takeovers of exposed servers

26 Oct

US CISA lists both flaws as actively exploited

Every PHP setup that serves pages was exposed, WordPress included, and today's 1337.ventures runs on WordPress. For an SC-licensed firm a breach is a reportable event. The simplest control is to have no PHP server to attack.

PHP2Shell, CVE-2026-109618 and CVE-2026-109619, all dates 2026. Sources: Tenable PHP2Shell FAQ; TechCrunch, 24 Oct 2026

THE GAP

1337 has more proof than its peers. The homepage hides it.

3,500+
startups supported

68
Alpha Startups cohorts

2012
founded in Kuala Lumpur

- About 20 programmes and brands spread across seven menus.
- No portfolio, team faces or numbers on the homepage.
- An "Apply" link that loops back to the same page, and menu items that go nowhere.

Checked on 1337.ventures, 3 Nov 2026. 3,500+ startups: TechNode Global, July 2025

HOW PEERS COMPARE

The best accelerator sites do four things 1337's does not

WHAT THE SITE DOES	1337	ANTLER	ITERATIVE	GOBI	CRADLE	NEXEA
One clear "pitch us" button	No	Yes	Yes	No	No	No
Numbers on the homepage	No	Yes	Yes	Yes	Broken	Yes
Portfolio on the homepage	No	Yes	Yes	Yes	No	Yes
Founder stories	No	Yes	Yes	No	No	No
Platform	WordPress	Webflow	Webflow	Webflow	WordPress	WordPress

Sites reviewed 3 Nov 2026. Kejora Ventures blocks automated reading and is not included.

THE IDEA

Five doors, one for each person who visits.

Founders, SMEs, corporates, investors and the press each get one door. Every programme 1337 runs sits behind the door of the person it serves, and "pitch us" is on every page.

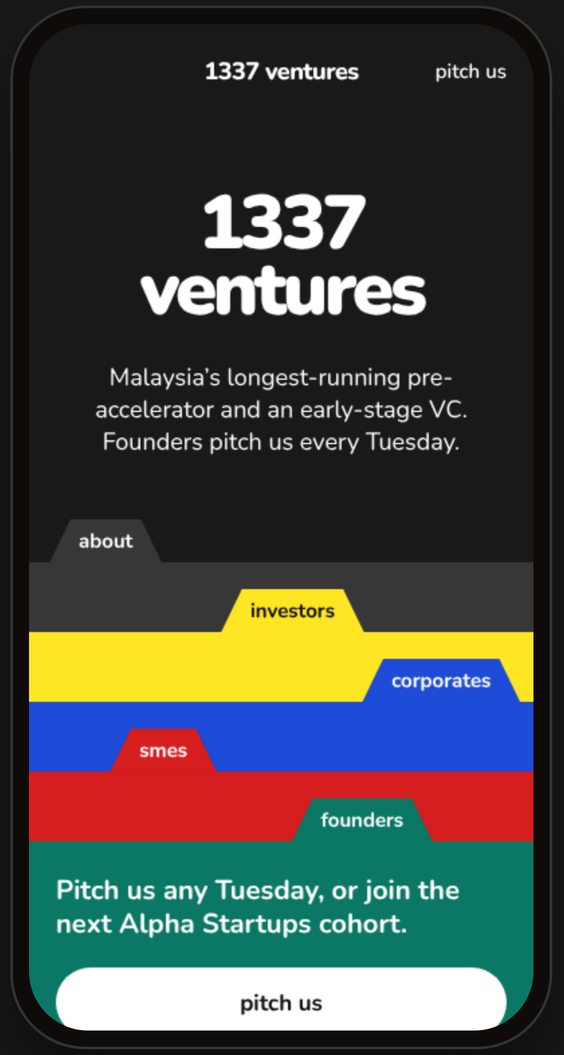

THE LANDING PAGE · TRY IT HERE

1337.ventures, rebuilt

Built and working in Vite, React and TypeScript. Scroll it on the phone.

- Opens as a stack of coloured folders, founders in front.
- 3,500+ startups owns the second screen, alone.
- Programmes slide past as you scroll. Alumni show a preview on tap.
- Ends on the pitch form, already open.

the desktop version

Concept design in the style of 1337 Ventures. Sample content and alumni lines to confirm with 1337.

ONE QUESTION IN PLACE OF SEVEN MENUS

Find your route

A founder types what they are building and picks a stage. The page says which programme to start with, and when the next Pitch Tuesday is.

The same rules route the real pitch form: an idea goes to Alpha Startups, pre-seed and seed go to Pitch Tuesday, an SME goes to the ECF Accelerator.

YOUR ROUTE

Kopi Labs

A booking app for neighbourhood coffee roasters. Pre-seed.

START WITH

Pitch Tuesday

Book this route

Kopi Labs is a sample. Stage rules to confirm with 1337.

BEHIND THE DOORS

Four inner pages, already mocked up

Pitch us

Stage, sectors and region in one row. The form and the Tuesday calendar on one screen.

Portfolio

Every company, filterable by sector, year and status, with exits marked.

Programmes

One page shape: who, when, what you get, apply. Alpha Startups first.

About

Faces, a timeline since 2012, and a plain note on how founder data is kept safe.

Mockups in the project files. Facts marked "to confirm" are the ones we need from the 1337 team.

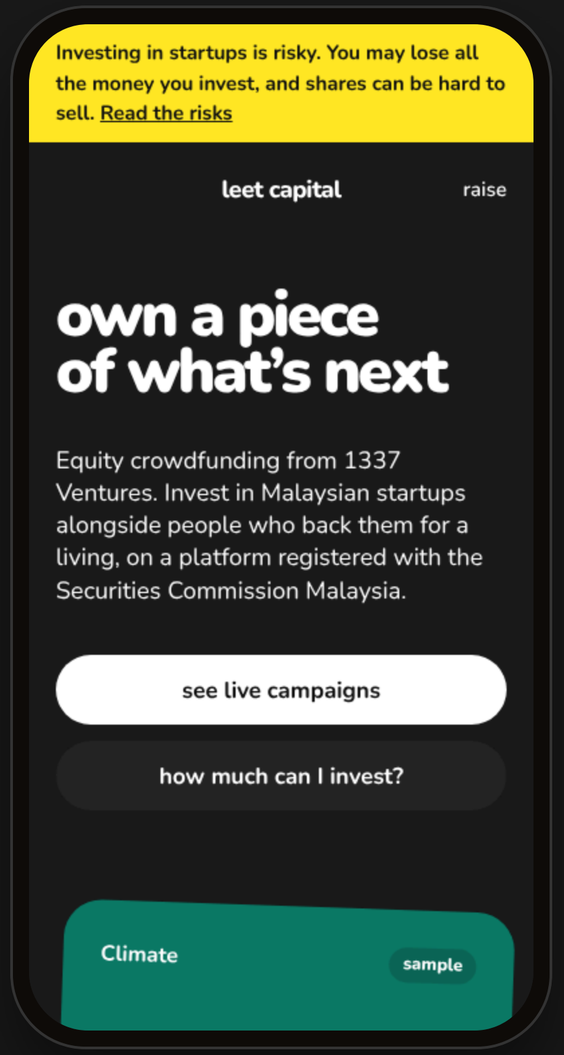

LEET CAPITAL · TRY IT HERE

leet.capital, rebuilt the same way

Today leet.capital draws everything in the browser, so Google and link previews see a title and nothing else.

- The same system and the same pre-built pages as 1337.ventures.
- The risk line sits above the first screen, not in the footer.
- Live campaigns first, each with its progress and days left.
- The investing platform behind the sign-in stays where it is.

the desktop version

Concept design in the style of Leet Capital. Campaigns are samples. Checked on leet.capital, 3 Nov 2026.

LEET CAPITAL · TRUST FIRST

Answer the investor's first question before sign-up

Check your limit

Pick your investor type, type an amount, and see at once whether the SC limits allow it.

Four plain risks

You can lose everything. Shares are hard to sell. Your stake can shrink. Dividends are rare.

Registered, in words

The SC registration said plainly on every page, with a link to check it.

Investing in startups is risky. You may lose all your money.

Limits as published by pitchIN for SC rules, November 2026. Wording for Leet Capital compliance to sign off.

HOW IT IS BUILT

Nothing on the public site to hack

Editors

Write in a hosted CMS with single sign-on, MFA, roles and an audit log.

Pipeline

Builds plain pages from reviewed, scanned code in a private repo.

Visitors

Get those pages from a CDN with a web firewall. No server code runs.

- Pitch decks go to a separate encrypted store with a retention rule.
- Hosted in a Malaysia or Singapore region, for data residency and PDPA questions.
- Pages are pre-rendered, so Google and link previews read them in full.

READY FOR THE SC

An audit file for every area of the SC's rules

GTRM AREA	WHAT THE REBUILD HANDS THE AUDITOR
Governance	A named owner, a board summary, security training for editors
Technology risk	A website risk register, reviewed at each phase
Operations	MFA, access reviews, encryption, change log, a tested restore
Service providers	Due diligence files for the CDN, CMS and form vendors
Cyber security	An independent penetration test before launch, an incident runbook
Notifying the SC	A process for incidents and near misses

SC Guidelines on Technology Risk Management, revised Aug 2024. 1337 holds an SC equity crowdfunding licence through Leet Capital.

THE PLAN

Four phases from today's site to the new one

1

Map today's site

Every page, programme and link listed, so nothing is lost in the move.

2

Design

Final pages and the risk register, checked with the 1337 team.

3

Build

Site, CMS, forms, pipeline and monitoring.

4

Test and launch

An independent pen test, editor training, launch. The old site is retired.

Old links redirect to the new pages, so search rankings carry over.

Dates for each phase are targets to agree together

WHO BUILDS IT

Raja Hafify Bin Zaed

Founder of Artifisi Sdn Bhd. About 12 years in software. At AirAsia, scaled an app from about 1,000 users a month to about 1,000 users a second.

Artifisi makes games, including Orbwalker, and holds Malaysia Digital status.

NEXT STEPS

1. Agree how we work together.
2. An introduction to whoever runs the site today.
3. An introduction to the compliance officer.
4. The new site goes live on a date we agree.
